## SKILLS

Web Design

Motion Graphic

Graphic Design

Adobe Suite

## ABOUT ME

I have a passion for design and always want to develop my skills even further to go the extra level in design. I am a hard working young woman who can create professional design for print, graphics, and beautiful responsive websites, including custom WordPress websites. I am a quick thinker and can come up with ideas for new products and design ideas, this allows me to produce different designs and typography. I enjoy working with others and can also work by myself, with honest opinions and advice, wanting to show my ability in any work given to me.

## EDUCATION

Sept 15- *Canterbury Christ Church University*  
June 18 *Digital Media, BA*

I graduated with a First-class BA degree, doing Web Design which involves, HTML5, CSS3, Bootstrap, JQuery, JavaScript and making all websites responsive. It also included Motion Graphic and Graphic Design, creating A4 posters, leaflets and imagery. Competent in using the Adobe Suite which includes, Illustrator, Photoshop, After Effects and InDesign.

Sept 07 - *Homewood School and Sixth Form Center*  
June 14 A-Levels - ICT (Distinction), Double Business (Distinction). GCSE - English (C), Maths (B), Science (C), Media (C), Sociology (C), Law (D).

## EMPLOYMENT

Jan 19- *Hand Media International - Magazine and Website Designer*  
Present

My role is to design 6 magazines to a high standard. Working to a deadline to ensure they are ready for print on time. I create and design Wordpress websites that we have in the company on my own as the only web designer

Sept 18- *United Balloon and Gas - Design & Account Assistant*  
Jan 19

To produce designs for marketing material, including social media advertising, posters and leaflets. Produce designs for new balloons and manage customer accounts.

Aug 14- *Meritum - Carer*  
Sept 18

# UNIVERSITY MODULES

## Individual Creative Practice

---

This module allowed me to create anything I wanted. I created a responsive website to get people to understand what the top 6 foods are for your heart and bones. I created the logo, all the graphic icons and imagery, taking my own photography for the website.

## Digital Entrepreneurship

---

For this project, we worked in a team of 4 people and had to produce a new business idea. As a group, we came up with the idea of coffee and milk capsules with a self-heating flask for outdoor adventures. Myself and Luke teamed up to make the responsive website for the Everbean brand.

## Professional Creative Practice

---

For this module, a charity called The High Five Club came in and asked us to create a flyer to advertise their £5 a month membership and to make a video for people to fundraise for the charity. I produced the flyer and video following the branding guidelines that they use for their website.

## Specialised Study

---

In this module I could create anything I wanted, I created a website for an idea that I came up with called the smart bin. This lets you put rubbish and recycling in the same bin which sorts it all out for you. I created the website, logo and all the imagery and icons.

## Web Design

---

The task was to create a website of a made up product or a product that has been done before. Doing research I decided to reinvent the Remington straighteners and re-branded them as a made up company called AV. I created the website, logo, done all the branding and graphics.

## Digital Imaging

---

We were told in this module to make five manipulating images and tell a story through them. My story was about being claustrophobic, showing how I learned to conquer my fear from the first image to the last. Using Photoshop to edit the images of the photography that I took.

Throughout my university degree I have learnt many different skills such as:html5, css3, bootstrap, design layout and typography. I have also learnt how to use the Adobe Suite including: Illustrator, Dreamweaver, Photoshop, InDesign and After Effects. The degree has given me a real insight of the design field and has taught me the best practices for creating professional websites, videos and graphics.
